

Kitting

Kitting in Microsoft Dynamics-NAV

Benefits:

Create flexible BOMs. Kitting offers standard kit BOM's with the flexibility to customize an order as needed. Track resource usage or depletion. With resource set up you can better manage costs.

- **Manage inventory better.** Kits can be inventoried as an item with component attached. Kits can be built as needed per order.
- **Take control of item visibility.** Flexible options allow for the level of detail needed per document. The detail of each kit can be individually shown per sales order, packing list, pick tickets or invoices.
- **Improve visibility on kit sales.** Kit sales can be separately reported for great insight into sales numbers and margins.
- **Enable more accurate pricing.** With set up the kit price can automatically be updated when component prices increase or decrease.

Kit sales and kit resources are fully integrated into your accounting processes, inventory availabilities, packing and shipping operations. Kits have the option of assembly and disassembly. Kit pricing structure accounts for pricing changes in component parts. Details on printed documents can be customized per document.

Roll-up pricing can be set up per item

Kitting can reflect both set-up and consumption of machine or people resource activity.

With Microsoft Dynamics-NAV, kitting, sales personnel have information regarding kit details on demand. Each kit can be used as is or customized to meet the individual order. Drill down capability give immediate availability for individual components. Unsold kit assemblies can be disassembled for more efficient use.
